

Amendments to the Claims

Kindly amend the claims as follows:

1. (Currently Amended) A connector element for production of concrete cavity walls, comprising: a fiber composite shaft with at least one over-molded component at one end of the of the fiber composite shaft comprising at least one end embedded in the concrete and one or more locating flanges.
2. (Previously presented) The connector element of claim 1 such that the end provides bi-directional force transfer between the connector body and surrounding concrete.
3. (Original) The connector element of claim 2 with a flange for orientation of the connector shaft perpendicular to a plastic concrete layer.
4. (Original) The connector element of claim 3 with snap features for connecting to reinforcing steel.
5. (Original) The connector element of claim 2 with a flange for setting the depth of penetration of the connector into a concrete layer.
6. (Previously presented) The connector element of claim 2 with a pointed end to set the distance from a form surface to the end of the connector.
7. (Previously presented) The connector element of claim 1 wherein the over-molded component is made from a polymer.
